

# AlertCommander®

Pre-Recorded Warning and Message  
Delivery System for Mass Notification and  
Public Address Loudspeaker Systems

## AlertCommander®

ALERTCOMMANDER® is a feature filled pre- recorded alert tone, warning and voice message delivery system that enables the user to download audio files, record their own messages or warnings, select, manipulate and edit the messages, then project the highest quality pre-recorded sound files through SOUNDCOMMANDER® high power, loudspeaker systems. The ALERTCOMMANDER® system is unique in its advanced capabilities, flexibility, portability and light weight.

**The ALERTCOMMANDER® Output Station** is a light weight, hand held, Android based tablet computer. Pre- installed Proprietary AlertCommander OS® (ACOS) Software enables the operator to project pre-recorded warning tones, sirens, messages, or tones directly from the amplifier/control module to any SOUNDCOMMANDER® sound system via an Android color touch screen mobile device. The user can download files and locally record and edit messages for the system.

### ALERTCOMMANDER PC (ACPC) Program for Windows® PC

- A straight forward, easy to understand and operate main program screen.
- Built- in voice message recorder, to quickly record new messages or commands.
- Integral voice and file editing software.
- An external computer microphone for quick local recording of voice messages.
- Download, input from external sources, or record your own warning sirens, or tactical alert tones and voice message files in any language and store them in the ACPC Source File Library on the main PC program screen for later use.
- Organize the files in to different categories
- Manipulate, rename them, add written descriptive comments, edit and improve their audio quality, and generate custom playback parameters.
- Quickly record new message files.
- Make and pre- store output file lists for future export.
- Select the desired messages or warnings from the ACPC program Output List and export them to the Output Station for delivery through a SOUNDCOMMANDER® Sound System

### ALERTCOMMANDER® Portable Output Station (ACOS)

- Pre- installed Proprietary AlertCommander OS® (ACOS) Software
- Includes high resolution color touch screen technology. Tap or roll the touch screen with a finger to locate and play files.
- The user selects the appropriate file, from either a " Warnings" folder or a " Sound Bites" folder with the touch of a finger, rolls the screen to the appropriate file, then instantly sending it to the SoundCommander® sound system with a light finger tap.
- The user can further control the output by selecting different states; Play Once, Timed Play or Play Continuously.
- A password protected "Technician" setting enables a technician to enter the system to make changes or to troubleshoot the software
